Global EV Vehicles Summary

* I obtained this information and csv from https:/www.kaggle.com/

* The three main types of electric vehicle (EV) powertrains: Battery Electric Vehicles (BEVs), Fuel Cell Electric Vehicles (FCEVs), and Plug-in Hybrid Electric Vehicles (PHEVs).

* Each of these powertrains has distinct characteristics, advantages, and limitations.

* The history of electric vehicles spans from early innovations in the 19th century to a significant resurgence in the 21st century.

* The market share of electric vehicles was notably high in the early 1900s but declined with the rise of gasoline-powered cars.

* The 1970s oil crisis sparked renewed interest in EVs, leading to various experimental models. Notable early electric vehicles, such as the Sinclair C5 and GM EV1, paved the way for the modern electric vehicle revolution.

* Today, electric vehicles are at the forefront of automotive technology, with continued advancements and growing adoption worldwide.
